

# Source of Environmental Knowledge

**Dear Conservationists  
and Friends of the Environment,**

recently, reports about Solar Storms issued by NASA, ESA and other organizations have been broadcasted again in several TV Channels. Expected to hit the Earth in the end of the year 2012 they may cause huge damages; as a result, millions of people worldwide will have no electricity, no access to drinking water, telephone lines; transportation and telecommunication will come to a standstill, and more.

The information provided is proven and has been known for a long time, but only a few people are taking notice of this information, especially about the consequences for everyone.

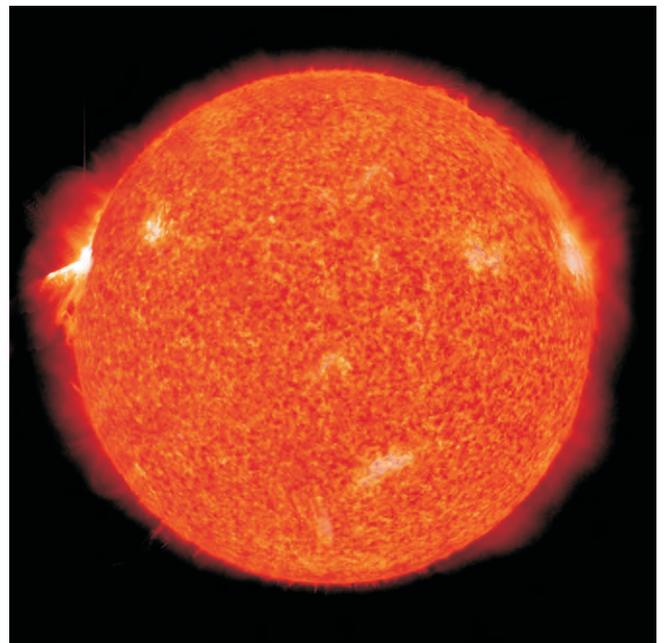

**Our target should be to do the impossible,  
to stop the progressing climate change;  
and let's go back to nature**

Of course, some organizations like to spread panic, talking about the End of the world, but this is not our intention. Of course, nobody knows, how the Earth will be affected, maybe partially, but which part? What are the ramifications for everybody?

This news gave me sleepless nights.

**Ready to Be awakend?**

Why is mankind not waking up? Is it true that people are only interested in the present, not caring about the future?

**To Be or not to BE**

# NEWS

Google, and you will find out that all power Companies will be affected at the predicted time in 2012 by the magnetic field .

Caused by Solar storms, in March 1989, a huge part of north America was without electricity for almost 2 weeks, because conventional transformers and electric converters -still used today- were damaged.

Also, reports are predicting, that damage on photovoltaic systems alone could be as high as up to “2 Trillion €”; also windmills and geothermic facilities will suffer very high damages.

**The Blue Ecopower,** looking forward starting now with the first prototype.

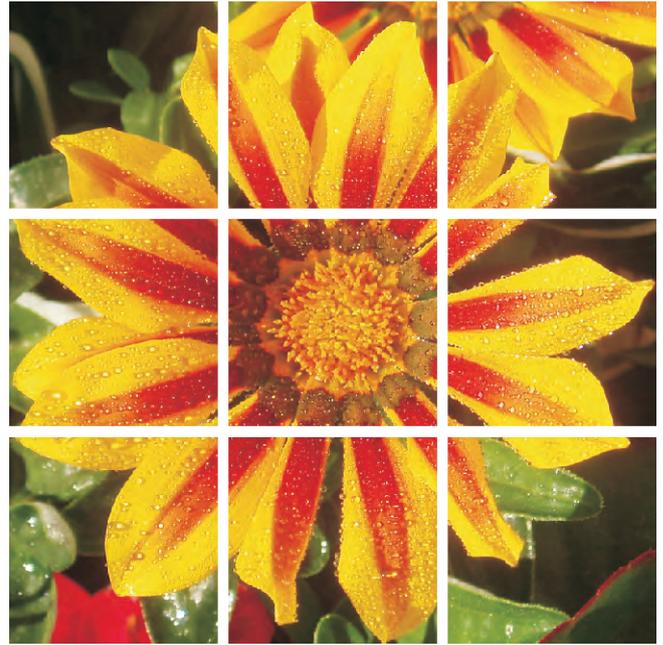

With our “Blue Ecopower”, a complete new alternative energy system, every house will be able to produce independently its own energy, because it can be installed in a way that will be not affected from this natural catastrophe. Especially warm countries with temperatures of more than 23°Celsius are providing ideal conditions for this system. Information on this subject can be found on our homepage under the heading “Blue Ecopower”.

For this system, a important part for our “Blue Building Concept” with its zero energy buildings and own water treatment systems, we are looking for small/medium size organizations and companies, which are committed on environmental issues, to establish worldwide our Blue Building ... (name of Country) Company in a Franchise Agreement.

## **The Blue Building Concept**

*“Expanding the notion of sustainability into a new dimension the BLUE Building Concept reaches beyond conventional, and often misleading superficial calculations of mostly fictional energy savings in buildings. The true balance of environmental impact exceeds the computation of energy consumed to provide habitable conditions: taking not only the comprehensive balance during the entire life cycle- including production and recycling – into consideration but also the dynamic gain and loss generated by users and daily changes of the environment. A key to understanding the BBC is the recognition of water as the "source" of all life vs. any other media carrying "energy". Therefore, a comprehensive concept of recycling interrelated to energy generation and consumption will prove to be the only true concept to save the environment.”*
